

Personal Profile

Data/Software Engineer with a demonstrated experience on Big data solutions including databases (SQL/No-SQL) and ETL/Data pipelines using cloud services. Solid understanding of fundamental Computer Science concepts. Familiar with requirement gathering and SDLC. Great programming experience in multi-language such as Python, Java, SQL and PowerShell. Excellent problem-solving skills and software engineering habits, including peer code reviews, unit testing, etc.

Core Skills

- OLTP/OLAP/ETL/ELT
- Data Visualization/Data Analyzation
- PowerBI/Tableau
- Azure ADF/ADL/Scope script
- Data Warehouse
- Agile/Scrum/SDLC
- AWS S3/Glue/Lambda/Athena
- Java/Python/SQL
- DBT/Docker

Career Summary

2021 – present **Data Engineer Capital Group**

Role outline

Serve in the Investment Group. Implement ETL logic to meet business requirements from stakeholders. Technologies include but are not limited to AWS S3, Lambda, Glue, Athena, Postgres RDS and Dremio.

Achievements

- Generated Glue jobs by analyzing data from different sources. Such as files in S3, CloudWatch/CloudTrail logs and other third-party APIs.
- Utilized Glue jobs and Lambda functions to handle data processing logics with different kinds of triggers such as SQS and Glue catalog events.
- Automated ETL process with Glue jobs by using AWS CDK which extract CloudTrail log into parquet files and dump them into Athena DB.
- Initiated, Developed and managed an ETL pipeline. Converted IRR, MoM, FundReturnRatio and other Excel functions in Pyspark. More than 20 Lambda / Glue jobs were included for data staging, logic processing, and datasets validation. All permissions and resources access are defined in AWS CDK.
- Persistent the ETL results into Postgre DB via AWS Glue jobs. Partitioned and indexed monthly coming datasets with pre-defined store procedures to improve performance.
- Rendered Postgre datasets into Tableau visuals and published into different workspaces. Implemented Role-Level-Security to limit different data access requests.

2019 – 2021 **Software Data Engineer Microsoft**

Role outline

Work as a software data engineer under Office IP Antispam team. Response for maintaining and upgrading the ETL/ELT data pipeline, Lens/ADF jobs, and stream dataset in Cosmos and ADLS with Scope script and Kusto queries. As well as generate Ad-hoc visuals with varieous tools based on different requirements.

Achievements

- Migrated Cosmos uploader/downloader with ScopeSDK, T-SQL, and PowerShell from old JScript logic. Equipped with alert and pipeline monitor to enhance durability.

- Troubleshoot issues, errors in ETL services. Generated probes, monitors, alerts for different components and services with C#,Scope language,and PowerShell.
- Built and maintained a big data platform (ADF/ADLS) in Cosmos Scope script as per industry standards and best practices.
- Performed DB admin activities on the multiple DB Servers. Optimized data pipeline by rewriting new logic and SQL schema, gained both performance and service durability. Reduced up to 20% storage cost with archiving and re-indexing stale data as well as increase the query performance.
- Optimized slow running scope queries by using scope hints. Generate TB level data daily bases.
- Implemented Ad-hoc data status monitors and dashboards with PowerBI and Lens platform. Delieverd reports to end users weekly and monthly.

**2018 – 2019 Data Engineer
Conagra Brands Inc.**

Role outline

Serve under Cost to Serve team. Generated annual reports from the sketch. Implemented data modeling, user validation and dynamic filters based on stakeholders' requirements.

Achievements

- Designed and implemented the whole ETL (Extract, Transform, Load) data process with various transactions within SSIS packages to implement business rules and logic.
- Generated PowerBI reports, dashboards with Star schema. Implemented complex requirements in PowerBI by using DAX and M language.
- Reduced refresh waiting time by using PowerBI API in PowerShell scripts, deployed, automated the scripts on CtrlM Servers.
- Created customized visuals with R libraries. Embedded the PowerBI visuals within Sales-force homepage with PowerBI-JavaScriptlibraries.
- Accumulated agile Product Management experience - a full gamut of creating stories, generated PowerBI reports and dashboards, working through user acceptance testing (UAT).
- Hold scrum meetings as a scrum master. Wrote various documents such as data mapping document, work detail descriptions for KT sessions, and future development.

**2013 – 2015 SQL BI developer
KSDHC Inc.**

Role outline

As a SQL BI engineer, utilize the MS BI stack (SSIS/SSRS/SSAS) to perform ETL processes with a big scale of data. Includes data cleansing, data labeling and aggregation, etc. Generate different visuals with Microsoft SSRS.

Achievements

- Created logical and physical data models based on the requirements utilizing Erwin and NaviCat.
- Improved the performance of the official website by optimizing slowly running queries, utilized indexes, partitions, and deadlock monitor via SQL Profiler and DTA.
- Normalized database tables to avoid redundancy and DML anomalies.
- Developed complex SQL scripts and procedures for data profiling and auditing purposes. Combined C# logic in SSIS packages.
- Utilized Microsoft SSIS/SSAS/SSRS to handle ETL logic, create ad-hoc reports with both tabular model and cube model.
- Developed various Dashboards and Stories using advanced Tableau features including calculated fields, parameters, table calculations, row-level security, R integration, and dashboard actions while dealing with Cloud data in SSRS.

Education

2015 - 2018 **Oregon State University** (Master degree in computer science)
2010 - 2014 **Liaoning Normal University** (Bachelor degree in computer science and technology)

Certificates

Microsoft: **Azure Database Administrator Associate** (Since 2019)
Microsoft: **Data Analyst Associate** (Since 2019)
